

## Flush

Mr. John's flush units are the standard for our special event fleet. Unlike a basic drop toilet, the unique flush system washes waste into the tank and out of sight. The flush system is operated with an easy to use foot pump and our drivers are more than happy to demonstrate this for you.

The roomier Mr. John flush units are delivered to an event sparkling clean and fully charged with deodorizer. The flush units include an interior mirror and are stocked with adequate hand sanitizer and toilet paper for up to 200 uses per unit before service is required.
